# **“From Precision Oncology to Comprehensive Toxicity Governance in Thoracic Malignancies: Embedding Symptom Burden, Financial Toxicity, and Time Toxicity as Longitudinal Outcomes Across the Continuum of Care”**

**Raffaele Giusti M.D.**

Therapeutic innovation in thoracic oncology has improved outcomes but has also shifted toxicity from a purely biomedical concept to a system-level burden that accumulates across the continuum of care. Comprehensive toxicity governance frames symptom burden, financial toxicity, and time toxicity as longitudinal outcomes relevant to clinical effectiveness, equity, and sustainability. Embedding these measures and integrating supportive and palliative care early can strengthen value-based decision-making, align care with patient goals, and inform policy on benefit, access, and resource allocation in thoracic malignancies.
